

Inventory Manager

What is it?
A prebuilt Cloud solution that dynamically calculates inventory targets, compares targets to actuals, and highlights the imbalances.

What does it require?
Oracle Demand Management Cloud – no other software or hardware requirements.

What are the benefits?
Ability to see imbalances in inventory health and a solution that recommends rebalancing across an inventory network. Better mix and lower total inventories.

What's unique about this solution?
The SIMPLICITY of the application. Most "Inventory Optimization" solutions are highly complex and mathematical.

Key features
Embedded business rules and inventory targets with ability to override logic to accommodate network realities.

Improve inventory health across your supply chain with **AVATA's Inventory Manager Performance Solution** configured completely in Oracle's Demand Management Cloud. It's simple to understand and comparatively a low-cost, low-risk solution for inventory optimization.
